

Elevator Technology

AGILE for residential buildings

thyssenkrupp

Residents want to live in their homes. Not in the lobby.

The ultimate solution for the ultimate destination.

As the saying goes: "There's no place like home." Residents want and need a quick ride upstairs. To keep residents happy, building owners can take steps to increase the efficiency of their elevators.

By implementing a system that intelligently groups together people traveling to similar floors (or offer VIP service), those passengers will get to their destinations faster. That's where AGILE comes in.

thyssenkrupp's Elevator Technology Americas business area is an industry-leading passenger transportation systems group. With more than 13,500 highly skilled employees, Elevator Technology offers innovative and energy efficient products designed to meet customers' unique requirements. It offers passenger and freight elevators, escalators and moving walks, plus tailored service solutions for all products. More than 200 locations in the Americas provide an extensive sales and service network to guarantee proximity and convenience to customers.

It's all about getting home faster.

Greater efficiency for transporting residents and visitors.

Once passengers make a selection on the user-friendly display, they're directed to a specific elevator and arrive at their destination faster.

Easy-to-use, customizable kiosks.

Building management can add custom button labels and logos to improve the passenger experience and make it easier to find and get to their destination.

Improved resident and visitor experience.

Innovative technology will impress residents and visitors, get them to their destination faster and enable management to greet people with personalized messaging.

Greater control for exclusive access.

Management can restrict elevator cars for specific tenants, especially those who pay a premium to live on the top floors, as well as building representatives and leasing agents.

Easy integration with existing security systems.

AGILE – Security Access works with existing security systems or can function as a stand alone system, operated via third-party card reader (inside or outside the car) or a password or PIN.

Smarter elevator management.

Building management can assign specific elevator cars (or groups of cars) for building staff only – overriding other elevator calls.

Reduced energy expenses.

Analyzing traffic patterns enables building management to control elevator usage and save on electricity and energy bills.

Easier move-in and move-out.

Building management can assign specific elevator cars (or groups of cars) to work only between tenant floors and the ground floor while moving.
