

AGILE Destination Controls

Intelligence going up.

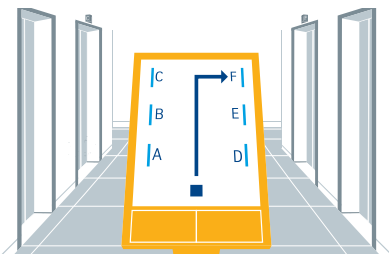

Instead of pressing traditional up and down buttons, you instruct the system where you want to go before you enter the elevator, using a

kiosk. The system then assigns elevators to passengers with common destinations, transporting you faster and more efficiently.

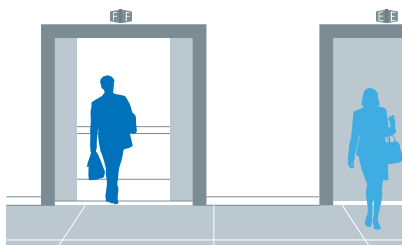

Step 1

Passengers use the kiosk to select their floor.

Step 2

AGILE clearly directs each passenger to an assigned elevator.

Step 3

Passengers board the assigned elevator that transports them to their destination fastest.
